

Spray Characterization Services for The Pharmaceutical Industry

 **En'Urga Inc.®**
Innovations in Quality Control

En'Urga Inc. is the industry leader in customized optical diagnostic equipment for the most challenging factory floor applications. En'Urga specializes in research, design, prototype development, customization, and calibration of optical diagnostic equipment. These are suitable for the measurement of temperatures, gas concentrations, and particulate volume fractions of both single phase and two phase reacting flows.

We have been in the business of optical diagnostics and research for 20 years serving many Fortune 500 companies and national agencies in the aerospace, automotive, pharmaceutical sectors and more.

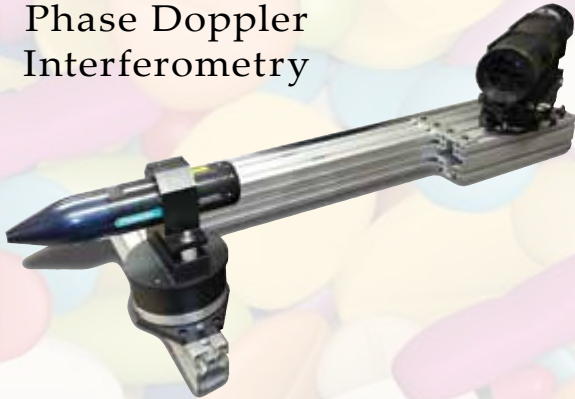

En'Urga offers the full range of spray characterization services for the pharmaceutical industry. Serving several top pharmaceutical companies, En'Urga provides accurate and reliable data using real world fluids such as pharmaceutical powder mixed with organic solvents. In addition to the conventional diagnostics for drop sizing and velocity, En'Urga provides full planar surface area density and mass concentration with equipment that is unique in this sector.

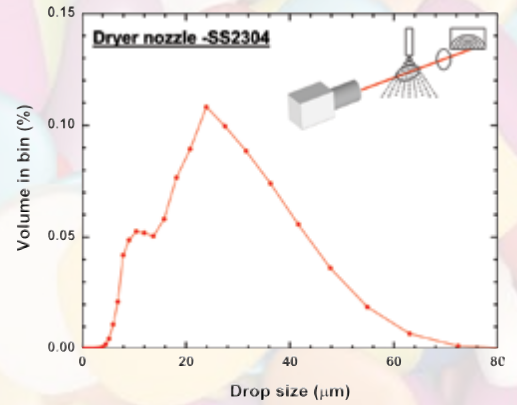

List of Diagnostics

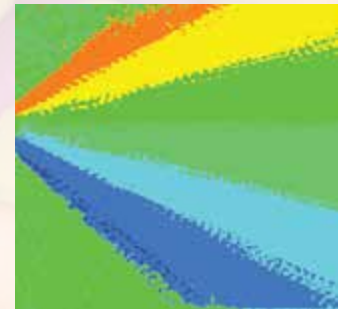

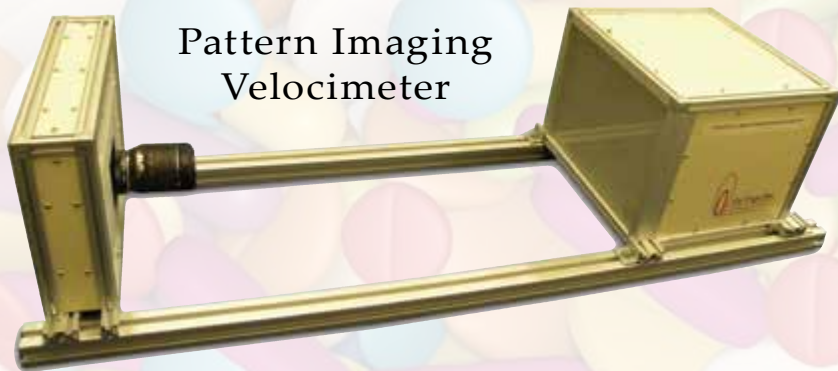

Phase Doppler Interferometry

Drop Sizing Measurements

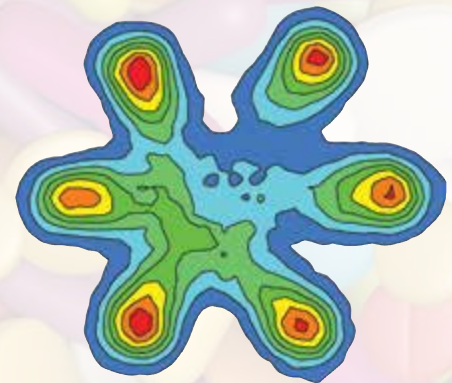

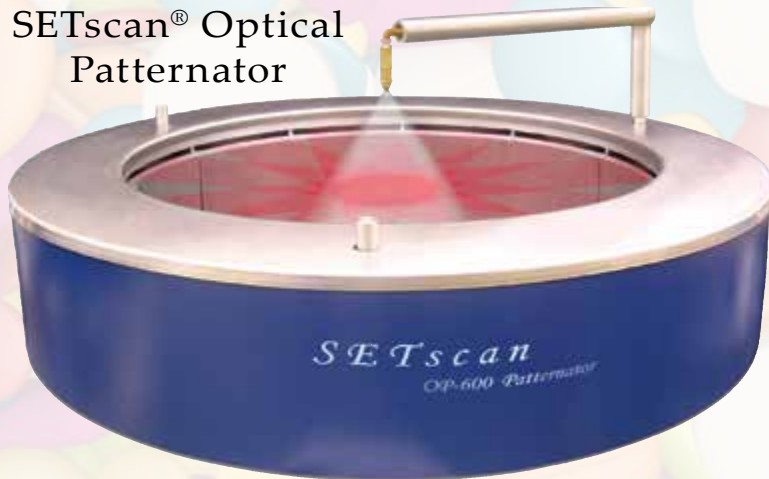

Pattern Imaging Velocimeter

Velocity Measurements

SETscan® Optical Patternator

Spray Patternation

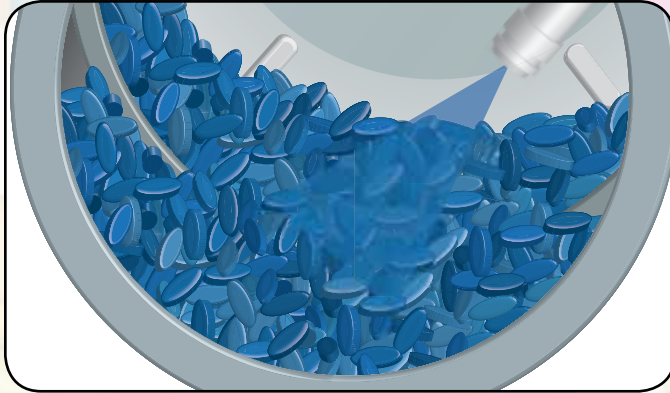

SETscan® Large Area Patternator

SETXvue X-Ray Tomography Systems

Applications

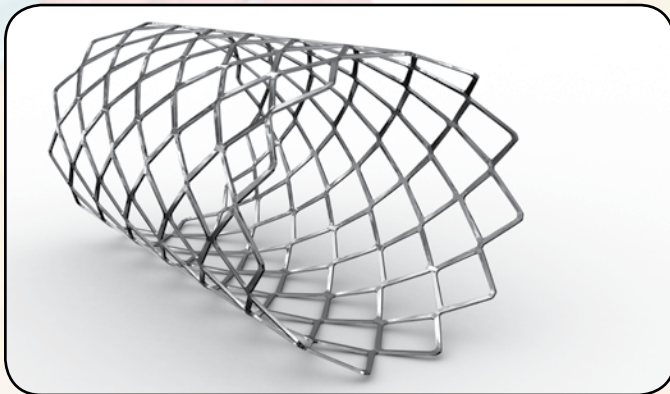

Tablet Coating

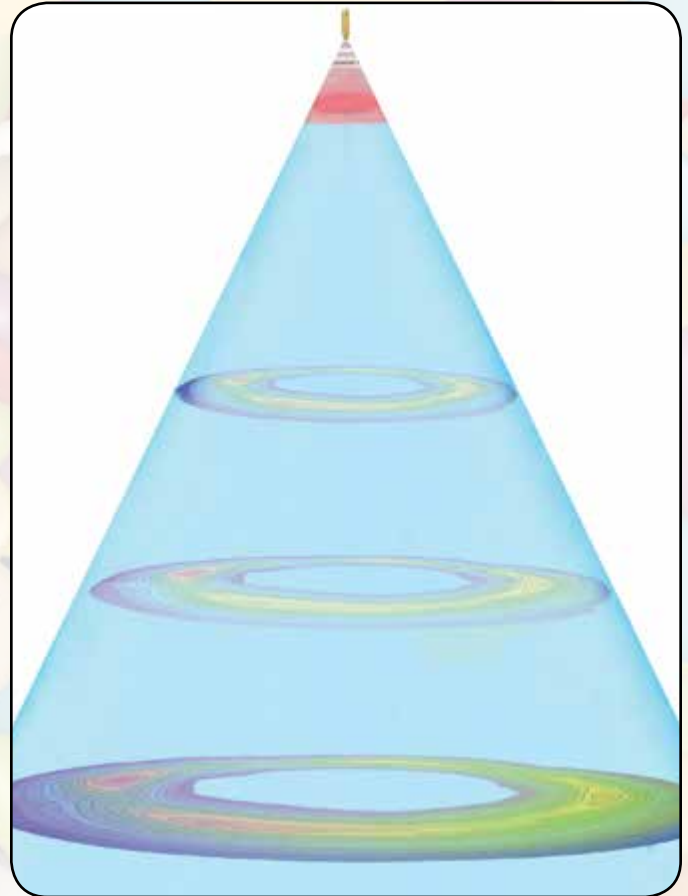

Spray Dispensers

Nebulizers

Stent Coating

Spray Drying

Spray Analysis is Our Expertise
